Smartgyro Brings Unique Stabilization Solution to Sanctuary Cove and Targets Australia Network Expansion

Sanctuary Cove International Boat Show, 19th to 22nd May, The Pavilions: Booth 104

Gyroscopic stabilization technology company Smartgyro is showcasing its innovative solution at the Sanctuary Cove International Boat Show as it targets further network expansion in the country.

After growing the line-up of SG series gyroscopic units in recent months to encompass a wider variety of vessels, this year's show marks the first opportunity for Smartgyro to highlight the full range to prospective partners and customers in the key Australian market.

YANMAR-backed Smartgyro is also stepping up its Australia expansion project to strengthen the dealer network and raise awareness among OEMs and boaters about the unique onboard maintenance and service benefits of its technologically advanced gyro stabilizers. The Smartgyro units are already marketed and supplied in the country by Fluid in Motion Marine.

Exhibiting on Booth 104 alongside sister company VETUS-Maxwell at Sanctuary Cove, Smartgyro will display the SG40, for boats from 50ft to 60ft, on the stand. Current units also available are the SG20, SG60 and SG80, with further upcoming launches to be announced soon.

Pieter Feenstra, Sales Director North-Europe, APAC and America, Smartgyro, said: "Since appointing our first dealer in Australia last year, Smartgyro's presence in the country has grown substantially and we are working hard to develop new collaborations and build brand awareness. With two key product launches in 2021 – the SG20 and SG60 – we can now meet the needs of OEMs and the Australian boating community with units for vessels up to 80ft, with full confidence that our innovative stabilizer solutions offer exceptional advantages. We are looking forward to the Sanctuary Cove show as an important opportunity to meet with our industry colleagues, as well as new and current customers."

The outstanding innovation of the Smartgyro stabilizers is the cutting-edge modular mechanical design, ensuring the range is unique to the market as the only gyro units that can be serviced, maintained and assembled directly inside the boat. Time spent on maintenance and vessel downtime is minimized, with new design opportunities for builders and increased potential for installation in vessels with small access spaces. Ideal for both new builds and refit installations, the SG series also features design innovations within the control electronics, braking system, liquid cooling system and vacuum enclosure.
