Bayonet Ocean Vehicles Announces Latest Appointment to Strengthen its Team

Bayonet Ocean Vehicles Announces Latest Appointment to Strengthen its Team

Plymouth, MA, 10th January 2023 - Bayonet Ocean Vehicles announces the appointment of Dylan Hess, who has recently joined the sales team as Sales Engineer. Headquartered in Plymouth, MA, USA, Bayonet Ocean Vehicles is the leading manufacturer of person-portable amphibious tracked vehicles.

Following its launch early 2022, the company has continued to grow its team, with Hess the latest addition to the sales team. Hess began his career with the US Navy, working on computer and electronic equipment systems, following which he gained years of experience as field service technician in the autonomous underwater vehicle market. This background has allowed him to easily understand the features and functionalities of the amphibious vehicles, and interpret their benefits for the variety of applications they can support.

“Dylan has hit the ground running. He is passionate about our range of vehicles, and understands the spectrum of capability and power they offer. He has already been involved in a variety of customer demonstrations, advising those considering an autonomous underwater ground vehicle for their specific application, and demonstrating their benefits for the end user. He has been a great addition to the team, and we look forward to many years of growing the autonomous underwater ground vehicle market”, says Nick Hartman, VP Growth and Strategy.

Bayonet Ocean Vehicle’s autonomous crawlers can easily work in the surf zone, carrying larger sensor payloads on the seafloor. They can be fitted with a variety of environmental, oceanographic, hydrographic benthic and industry specific sensors for a range of commercial and military applications.

If you are interested in seeing a live demonstration of the Bayonet Ocean Vehicles, please contact Dylan Hess via the online contact form:

Bayonet Ocean Vehicles manufactures a range of autonomous underwater ground vehicles that are capable of transitioning from the beach into the surf zone and into deep ocean. They can perform a variety of tasks in any of these environments, making them a powerful tool for operators working in multiple marine disciplines. Powered by Greensea Systems, Inc. OPENSEA software platform, these amphibious tracked vehicles have a range of applications, including mine countermeasures and explosive ordnance disposal for the military, as well as beach survey and restoration, surf zone search and rescue, and offshore wind survey.
