Channel 28 to Debut Brand New TETRA Crew Radio Solution

At this year's METSTRADE, Channel 28 will provide the opportunity for those attending to experience its portfolio of superyacht crew communication solutions

METSTRADE, Amsterdam 19th – 21st November 2019, Superyacht Pavilion, stand: 11.415

Channel 28 will be carrying out the first ever demonstrations of its brand-

new TETRA radio solution for crew radios at this year's METSTRADE show in Amsterdam. This is the latest addition to Channel 28's ever-expanding cComm solution, which provides the most secure and easy to use superyacht crew communications on the market.

Commonly used by the UK emergency services, TETRA platforms offer secure, reliable and efficient communications. Channel 28's solution is customised to meet the needs of larger yachts with up to 60 crew.

The TETRA system is compatible across a range of different handsets, which include the compact and lightweight ST7500 and ST7000 Motorola handsets. Driven by style as well as function, customer-facing crew can now benefit from clear and efficient voice communications in a form as sophisticated as their professional attire.

“TETRA, also known as Terrestrial Trunked Radio, is a technology used to provide the ‘mission critical’ private mobile communications services needed by professional users such as the emergency services.” said Adrian Hicks, Director of Channel 28. “We have introduced this platform to the cComm solution as privacy on superyachts is paramount, but it is also capable of transmitting across a much larger number of channels on much larger superyachts than standard Digital Mobile Radios.”

As well as the new TETRA radio solution, Channel 28 will demonstrate the cClear duplex engine room communications system, which debuted at this year's Monaco Yacht Show. Channel 28's Morse Service Call Button, an essential device for superyacht owners, will also be part of the cComm portfolio available to try.

ENDS

Notes to Editors

If you would like a demonstration to find out more about the new TETRA solution, please contact j.molyneux@saltwater-stone.com +44 (0)7493 972232 or visit the Channel 28 Stand: 11.415.

About Channel 28

Channel 28 Ltd is an engineering and software development company focused on delivering programmed products and system solutions for superyachts.

Founded in 2012 by two engineers with experience of delivering bespoke systems to tight deadlines and at realistic pricing, the company was conceived to develop and locate well engineered products and then integrate them into systems for specialist customers.

Channel 28 boasts a variety of products specifically developed for the marine industry, and in particular the superyacht industry, including its flagship product cComm. cComm, provides secure crew communication solutions that are easy to use and fit for purpose. Now installed and in operation on an ever-growing number of yachts worldwide, cComm's proven technology, security features and custom solutions have made it a true success.

The Morse Service Call Button is Channel 28's latest development for crew communications. The sophisticated technology can be simply connected to WIFI with no charging base, offering over a year's usage from one standard battery.

With all available solutions tailored to yacht, crew and owner specific needs, their range of services and products available for the superyacht industry continues to expand and grow in line with industry and on-board technology requirements.
