Kongsberg Maritime launches its new CPX propeller solutions

Nor-Shipping, 4th April 2022 – Kongsberg Maritime (KM) is pleased to announce that it is dividing its industry-leading propeller systems into three distinct categories, C-Line, P-Line, and X-Line. The idea is to ensure the provision of reliable, safe, high-quality and high-performing propeller solutions which are adapted to all customer-specific requirements and pricing levels, building upon almost a century of hydrodynamic and engineering expertise. The demarcations are as follows.

C-Line

The 'C' in C-Line stands for 'Configured', and indicates that these propellers are configured within a pre-defined technical spectrum to suit customers whose priorities are short lead times and a strong performance-to-cost ratio. Numerous options are available within the C-Line propeller solution to fine-tune the offering further, presented in a lucid and straightforward manner which simplifies the decision process for customers. C-line simply enables higher quality and performance for the volume market.

P-Line

KONGSBERG's P-Line propellers prioritize Performance, and are therefore suitable for customers prioritizing propeller requirements such as the highest efficiency and the lowest levels of noise and vibration. Multiple options are offered, and an expert KONGSBERG engineer will consult closely with customers to ensure that P-Line propellers are designed to their exact hydrodynamic and mechanical specifications.

X-Line

The 'X' in X-Line denotes 'Extreme', underlining the fact that these are fully-tailored propeller solutions intended for customers with an exceptional requirement for special features which go well beyond the norm. Close collaboration between customers and an appointed KONGSBERG project team is a fundamental facet of X-Line propeller solutions, and KM is pleased to confirm that the option possibilities herein are limitless, extending to the inclusion of R&D (research & development) for new solutions.

"We're very excited to continue the regional rollout of our CPX propeller solutions, improving our competitiveness in the volume market," says Trond Paulsen, VP Propulsion and Engine Sales at Kongsberg Maritime. "The CPX lines give us great flexibility as well as allowing us a quicker response time when dealing with shipyards and designers. The clear definitions within CPX allow KONGSBERG to remain flexible while still being competitive on almost all vessel types above 1,000kW. We believe this will really help us to grow market shares for propellers, both as standalone items and complete solutions."

About Kongsberg Maritime

Kongsberg Maritime is a global marine technology company providing innovative and reliable 'Full Picture' technology solutions for all marine industry sectors including merchant, offshore, cruise, subsea and naval. Headquartered in Kongsberg, Norway, Kongsberg Maritime has manufacturing, sales and service facilities in 34 countries.

Kongsberg Maritime solutions cover all aspects of marine automation, safety, manoeuvring, navigation, and dynamic positioning as well as energy management, deck handling and propulsion systems, and ship design services. Subsea solutions include single and multibeam echo sounders,

sonars, AUV and USV, underwater navigation and communication systems.

Training courses at locations globally, LNG solutions, information management, position reference systems and technology for seismic and drilling operations are also part of the company's diverse technology portfolio. Additionally, Kongsberg Maritime provides services within EIT (Electro, Instrument & Telecom) engineering and system integration, on an EPC (Engineering, Procurement & Construction) basis.

Kongsberg Maritime is part of Kongsberg Gruppen (KONGSBERG), an international, knowledge-based group that celebrated 200 years in business during 2014. KONGSBERG supplies high-technology systems and solutions to customers in the oil and gas industry, the merchant marine, and the defence and aerospace industries.
