NeptuLink: Get 15% off cutting-edge broadband connectivity at the 2019 Miami International Boat Show

NeptuLink_{by MVG} can be seen on Booth C642 – C Tent / Miami Marine Stadium Park & Basin

Miami, February 14, 2019, Microwave Vision Group (MVG) will offer 15% off the retail price of its unique, high-speed NeptuLink_{by MVG} 4G Internet modem at the Miami International Boat Show (14-18 February, 2019). Customers ordering the system on the NeptuLink booth will pay just \$2125 to enable new levels of connectivity for safety and entertainment on their yachts or

motorboats; a limited time saving of \$375.

Designed and engineered expressly to address the varying conditions presented by the demanding maritime environment, NeptuLink is a sturdy, cost-conscious connectivity solution for boats and yachts of all types. It delivers rapid (up to 100 Mbps) and reliable Internet access up to 20NM offshore.

NeptuLink works by picking up a 4G or 3G/GPRS signal and converting it into an onboard network, providing optimal signal reception by allowing for radio wave propagation traits over the sea while compensating for the rolling and pitching motions a boat routinely experiences on any voyage.

This translates to a blisteringly fast and highly reliable data and voice connection even when miles out to sea, which as well as considerable safety benefits, can be used for uploading photos and video to social media and even streaming films and TV, all on standard cellular data plans. Meanwhile, when boats are in harbor, NeptuLink's Smart Network Switch provides the opportunity to shift from 4G to onshore Wi-Fi, enabling clients to economize on 4G data usage.

“By drawing upon MVG’s antenna expertise, NeptuLink enables 4G broadband at sea that is so much faster and more dependable than what you can expect from a standard cellphone connection,” says Jim Acree, Business Development Manager, MVG, Inc., based in Atlanta, GA. *“Our decision to offer a reduction of 15% on the NeptuLink purchase price for Miami Boat Show visitors represents an unmissable opportunity to experience shore-quality connectivity while on the water.”*

Miami Boat Show attendees are invited to visit the NeptuLink stand (Booth C642, C Tent), where representatives will be on hand to demonstrate how NeptuLink can improve quality of life on board by delivering the best connectivity.

About Microwave Vision

Since its creation in 1986, The Microwave Vision Group (MVG) has developed a unique expertise in the visualization of electromagnetic waves. These waves are at the heart of our daily lives: Smartphones, computers, tablets, cars, trains and planes – none of these devices and vehicles would work without them. Year after year, the Group develops and markets systems that allow for the visualization of these waves, while evaluating the characteristics of antennas, and helping speed up the development of products using microwave frequencies. The Group's mission is to extend this unique technology to all sectors where it will bring strong added value. MVG is structured around 3 departments: AMS (Antenna Measurement Systems), EMC (Electro Magnetic Compatibility), EIC (Environmental & Industrial Control). MVG is present in 10 countries, and generates 90% of sales from exports. The Group generated revenues of € 71 million in 2017.
