SES: Mantsprite Supports SES Sponsorship Of Vine Trust Project

Seawork International 2017

David Ash of Mantsprite has presented an ultrasonic wind sensor by LCJ Capteurs to Colin Anderson of Ships Electronic Services (SES) as part of SES's comprehensive installation of navigation and communication systems in support of the Vine Trusts' new medical ship MV Forth Hope. The presentation took place at Seawork International in Southampton in advance of the ship embarking for the Peruvian Amazon to provide primary healthcare

to the vulnerable and isolated communities in the region.

SES Director Colin Anderson will be aboard the vessel during the voyage and commented, “We are very proud to be associated with this excellent charity and have been delighted with the response we have received from several of the manufacturers we represent who, like Mantsbrite, have been most generous in providing vital equipment for the Forth Hope.”

As a respected installer for the world’s major marine electronics manufacturers, SES is the perfect partner for the Vine Trust supplying not only equipment and installation knowledge but also long term support and technical expertise as a contribution to the project.
