SES: SES Acquires Greenham Regis Marine Electronics

Ships Electronic Services (SES) has announced its acquisition of Greenham Regis Marine Electronics and has formed a new company, Greenham Regis Ltd which is a 100% subsidiary of Ships Electronic Services. Previous owners Andy Haines and Malcolm Lane join the board of Greenham Regis Ltd along with Stephen Roper and Paul Rees of SES.

Greenham Regis was established in Poole in 1964 as Greenham Marine Ltd and merged with Regis Electronics in 1997. The business is involved in sales,

service and installation of marine electronic equipment primarily aimed at the yachting market.

Managing Director of SES Stephen Roper commented, "Greenham Regis has been expanding in the yacht refit business in recent years and is a very natural fit with our own leisure division. The company has offices along the south coast at Lymington, Southampton, Poole and Chichester and an excellent team of engineers which complements our own eight facilities around the UK. We can now offer local marine electronic services throughout the country to exceptionally high standards."

SES is a specialist in marine electronics including satellite communications and navigation, working in commercial shipping, fishing, leisure and from its Aberdeen base, offshore oil and gas. The company is a service and supply centre for many of the leading manufacturers in the industry and is one of the few UK electronics companies working to the international quality standard EN ISO 9001.

The acquisition of Greenham Regis Marine takes immediate effect.
