The Pure H2O Company Announces Launch of the New Quatreau SmartTap

DATE: 29th June 2017

UK based The Pure H2O Company has launched its revolutionary **Quatreau SmartTap™**, into the marine market. A highly efficient, low power electronic, water delivery system designed to provide the purest of boiling, sparkling, chilled or ambient water, at the touch of a button.

The Quatreau range benefits from 7 years R&D, using WRAS approved

materials and is the only tap system to be manufactured in the UK. The compact **Quatreau SmartTap™** dispenses boiling, chilled, sparkling and /or ambient water options controlled by either a two or three LED lit button console installed alongside a sink or comes with its own stylish integrated drainer. The **Quatreau SmartTap™** has standard in-line filtration to reduce impurities from the water tank but with an upgrade to a Pure H2O RODI system, the tap will dispense drinkable water that is purer than all bottled water brands.

Water delivered from a Pure H2O RODI installation has been described as the purest, freshest tasting water available and the only system to carry an EPA certificate for removal of micro-organisms. The Pure H2O Company is the pioneer of home water purification in the UK and is the only business to guarantee the purity of the water. Installed with the **Quatreau SmartTap™** the result is 99.99% pure water; purer by far than all bottled water brands and free from the myriad of contaminants and impurities that can be found in general tap water. Most vessels will rely on the storage of mineral water bottles for consumption of those on board, but installation of a **Quatreau SmartTap™** with RODI system eliminates this requirement.

The **Quatreau SmartTap™** has been design engineered and manufactured to the highest standards from 316L stainless steel and available in brushed or polished finish, providing a clean modern look and ensuring longevity and the robust performance needed in a yacht galley. The optional sink drainer with integral drain turns the tap into a stand-alone counter top drinks station, ideal for fly bridge bar or larger galleys. The **Quatreau SmartTap™** is engineered to be consistently safe with clean, efficient flow. An optional safety lock for boiling water offers peace of mind for boat owners with young children.

Recently installed, pre-launch, at the Eurostar Paris Business Lounge, the **Quatreau SmartTap™** system delivers a continuous supply of chilled and sparkling water to lounge users and has the capacity to save a staggering 28,800 small bottles per day. The company believes that it will save Eurostar at least 0.5 million bottles in its first year of service whilst providing purer, healthier water to its customers. Equally at home working from a pressurized water system on a vessel, pre-launch installations have also been made for owners of Sunseeker and other major builders. The system is compact and energy efficient being suitable for vessels during build or retrofitted from 40 feet to the largest Superyacht.

The Pure H2O Company is the UK's leading manufacturer of high quality water purification systems, softeners, conditioners and multifunction taps that improve health and well-being through technological excellence. The **Quatreau SmartTap™** is priced from £1499+vat.
